

WHAT IS CLAIMED IS:

1. A foot massaging tub, comprising:
 - a main body having a bottom provided with a drain hole;
 - a draining pipe mounted on the main body and connected to the drain

5 hole;

 - a pumping motor mounted on the main body and connected to the draining pipe; and
 - an operation control device mounted on the main body and including a controller, a power output unit, and a sensor, wherein:
 - 10 the controller is mounted in the main body;
 - the power output unit has a first end connected to an electric wire of the pumping motor and a second end connected to the controller; and
 - the sensor is mounted in the main body and is connected to the controller.
- 15 2. The foot massaging tub in accordance with claim 1, wherein the sensor detects if liquid enters the draining pipe and sends a signal to the controller which controls the power output unit to operate, so as to open or close the pumping motor automatically.
- 20 3. The foot massaging tub in accordance with claim 1, wherein the sensor is mounted on an outer periphery of the draining pipe.
4. The foot massaging tub in accordance with claim 1, wherein the operation control device further includes an indication unit mounted on and

protruded outward from the main body to indicate the working condition of the pumping motor.

5. The foot massaging tub in accordance with claim 4, wherein the

indication unit is connected to the controller.

5 6. The foot massaging tub in accordance with claim 4, wherein the

indication unit consists of a light emitting diode.

7. The foot massaging tub in accordance with claim 1, wherein the operation control device further includes a power input unit having a first end connected to a power supply and a second end connected to the controller.
